

## CHIMOIL K/19

### Cationic emulsion of fatty acids

#### CHEMICAL CHARACTERISTICS

<b>Appearance:</b>	Liquid
<b>Colour:</b>	White
<b>Smell:</b>	Characteristic
<b>pH (sol al 10%):</b>	4,5 +/- 1,0
<b>Dry residue:</b>	14,5 % +/- 1,0
<b>Charge:</b>	Weakly cationic
<b>Lightfastness:</b>	Good

#### PRODUCT CHARACTERISTICS

CHIMOIL K/19 is a very fine emulsion obtained from modified amide fatty acids.

It has a weakly cationic charge and has good resistance to light.

It gives the leather a warm touch with a slightly greasy and natural touch.

Due to the high quality of the raw materials used, it does not highlight skin defects.

The weakly cationic charge contributes to the fixation of the dyes and all the other products used in retanning, allowing a high exhaustion of the baths.

It does not degrade the colors and leaves a fine and compact flower.

#### APPLICATIONS

CHIMOIL K/19 particularly suitable for the final phase of retanning.

In addition to giving a pleasant touch, it helps to soften the leather, giving fullness and roundness to the finished article.

Its use after color recovery helps to obtain bright and uniform colours, in particular on leathers with a highly anionic charge such as metal-free leathers or leathers tanned with vegetable extracts, it will allow for intense dyeing and exhausted baths.

The percentages to be used vary from 0,5 % to 2,0 % of shaved weight.

**Revision 02 of 06/05/2024**

Chemical-physical properties of the product have been determined in accordance with internal procedures by methods of analysis due to national and / or internationally recognised standards. The information contained in this data sheet are based on our current knowledge. Given the multiplicity of Factors that can influence the processing and use of our products, the customer is obliged to carry out its part tests and controls. No responsibility can Be taken by us for an incorrect use of the product
